

DACSS 604 a4: Final Presentation

By: Aiyman Akbar

Bitcoin Market Monitoring Dashboard

A tool that focuses on pattern recognition, not prediction:

- A dashboard for understanding current Bitcoin market conditions
- Compares today's market patterns to similar moments in the past
- Shows what happened afterward as a range, not a guarantee
- Translates technical signals into plain-English context

The Gap in Cryptocurrency Tools

Hype Tools

- Overconfident language
- “Buy now” energy
- Ignores uncertainty
- Misleadingly simple

The Gap

- Thoughtful users
- Emphasizes context
- Plain-English insight
- Clear uncertainty

Pro Tools

- Powerful market data
- Dense indicators
- Built for experts
- Often overwhelming

Why It Matters

Market Complexity

Crypto markets move fast.
They can be hard to follow
and easy to
misunderstand.

Existing Tools

Many tools miss the mark.
Some overhype markets;
others overwhelm users.

The Solution

This dashboard fills the
gap, providing a clearer
way to understand what is
happening.

Context is Key

Context over certainty. We
show history instead of
pretending to know the
future.

The Data

The Data-Driven Story

Market Behavior

Track how Bitcoin is moving
right now

Historical Comparison

Compare current conditions
to similar past windows

Responsible Interpretation

Show uncertainty instead of
overconfident predictions

The goal is to turn market patterns and data into simple English context to inform decisions, not give financial advice.
